                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Submitted (NOV-1999) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: INHIBITOR OF THE WNT SIGNALING PATHWAY. DOWN REGULATES BETA-CATENIN. PROBABLY FACILITATE THE PHOSPHORYLATION OF BETA-CATENIN AND APC BY GSK-3B (BY SIMILARITY).
-!- SUBUNIT: INTERACTS WITH GLYCOGEN SYNTHASE KINASE-3 BETA (GSK-3B) AND BETA-CATENIN. THE INTERACTION BETWEEN AXIN AND BETA-CATENIN. OCCURS VIA THE ARMADILLO REPEATS CONTAINED IN BETA-CATENIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DOMAIN

dependent phosphorylation of beta-catenin.;

embo J. 17:1371-1384(1998).

-i- FUNCTION: INHIBITOR OF THE WNT SIGNALING PATHWAY. DOWN REGULATES BETA-CATENIN. PROBABLY FACILITATE THE PHOSPHORYLATION OF BETA-CATENIN AND APC BY GSK-3B (BY SIMILARITY).

-i- SUBGUNIT: INTERACTS WITH GSK-3B AND BETA-CATENIN. THE INTERACTION BETWEEN AXIN AND BETA-CATENIN OCCURS VIA THE ARMADILLO REPEATS CONTAINED IN BETA-CATENIN. TERNARY COMPLEX. ALSO BINDS TO PLAKOGLOBIN (GAMMA-CATENIN), APC, DYL AND P22A (BY SIMILARITY).

-i- SUBCELLULAR LOCATION: CYTOPLASMIC (BY SIMILARITY).

-i- SUBCELLULAR LOCATION: CYTOPLASMIC (BY SIMILARITY).

-i- TISSUE SPECIFICITY: HIGHLY EXPRESSED IN TESTIS, THYMUS AND LUNG FOLLOWED BY CEREBRUM, CEREBELLUM, HEART, KIDNEY, SKELETAL MUSCLE.

"Xenopus axin interacts with glycogen synthase kinase-3 beta and is expressed in the anterior midbrain.";

Mech. Dev. 80:147-151(1999).

-i- FUNCTION: INHIBITOR OF THE WMT SIGNALING PATHWAY. DOWN REGULATES BETA-CATENIN. PROBABLY FACILITATE THE PHOSPHORYLATION OF BETA-CATENIN AND APC BY GSK-3B (BY SIMILARITY).

-i- SUBCELLULAR LOCATION: CYTOPLASMIC (BY SIMILARITY).

-i- SUBCELLULAR LOCATION: CYTOPLASMIC (BY SIMILARITY).

-i- SUBCELLULAR LOCATION: CYTOPLASMIC (BY SIMILARITY).

-i- BYELOPMENTAL STAGE: WEAKLY AND UBJQUITOUSLY EXPRESSED THROUGHOUT EARLY DEVELOPMENT, AND HIGHLY EXPRESSED IN THE ANTERIOR MESSENCEPHALON ADJACENT TO THE FOREBRAIN-MIDBRAIN BOUNDARY.

-i- PTM: PROBABLY PHOSPHORYLATED BY GSK-3B AND DEPHOSPHORYLATED BY
                                                                                                                                                                                                                                                                                                                                                                                                            the European Bioinformatics Institute.
